**Ed Hurst, Computer Minister**  
13501 SE 29th, TRLR 55  
Choctaw, OK 73020  
cellphone (405) 503-1692

My primary clientele are churches and other non-profits. However, I do work with individuals, as well. My specialty is training. While I can perform a wide range of fixes, if you need serious technical assistance, I may not be able to help you. If you simply need to understand your computer better, and want to learn how to handle things everyone should know, and get the most out of your computer, then I'm your man. Computers exist to serve human needs, but they come with limits most people don't understand well.

There are no canned lessons. Everything is tailored to your situation and your needs. This is not about making you conform to some arbitrary standard, but helping you find your own way. I know how to mind my own business and help you get what you need. My time may be limited, but you'll find it very hard to tax my patience. The only limit is your desire to understand; I'll gladly teach you anything I know about computers and software, and help you learn more on your own.

I'm not in business; I'm in the ministry. The only certification I have is my ordination. There are no guarantees or warranties, and there are never any fees. I really don't care about the money. So long as I have the resources I'm ready to serve you. Your donations are gratefully accepted, but the onus is on you to mention it. And like every other ministry, if it receives no support, there are limits on how much I can serve you or anyone else.

I also strive to recycle and redistribute used systems and computer hardware. I can perform some of the simpler maintenance and fixing, but my focus is on helping you to need less help. I actively use Windows and Linux, and have experience with Mac, Unix and

other operating systems.

Of course I make house calls.

Topics might include:

- Computer maintenance
- Computer security
- Basic Internet use, finding stuff
- Browsers and email
- Introduction to word processors and spreadsheets, office procedures
- Introduction to photo editing
- Internet etiquette ("netiquette")
- Simple webpage and HTML
- Installation, setup and administration of a Linux server

I have experience working as a professional educator, with home-schoolers and senior adults. I can write course materials, as well.
